PROJECTS

Train Smart AI *Deployed at:* <https://train-smart-ai.vercel.app/>

December 2024 - January 2025

- **Description:** Harnessed OpenAI's API to gather information from the user to create a personalized workout and nutrition plan. Generates personalized plans with the user's information in under 5 seconds. Uses a backend server to retrieve API data and save each workout plan the user creates. Includes a clean user interface.
- **Tools Used:** OpenAI API, React, JavaScript, Vercel, Render, HTML, CSS.
- **Skills Demonstrated:** Deployment, APIs, Fetching/Posting, Clean UI, Familiarity with the React framework.

MLB Outcomes Predictor

August 2025 - Current

- **Description:** Ingested 50k+ of rows of data from MLB StatsAPI, created parquet files to store data, and used DuckDB to execute SQL queries. Used this data to train an XGBoost model to predict the game winner and score. Currently implementing a JavaScript frontend and in-game outcome prediction.
- **Tools Used:** Python, Pandas, DuckDB, Scikit-Learn, MLB StatsAPI.
- **Skills Demonstrated:** API Calls, Data Analysis, Feature Engineering, Machine Learning, Data Cleaning.

Text Whisperer

July 2025

- **Description:** A Chrome extension that allows users to select any text on a webpage and launches a contextual AI-powered chat window for instant explanations and follow-up questions, enhancing in-browser learning and research. Works even in viewers without content scripting (e.g., PDF viewers).
- **Tools Used:** TypeScript, Node.js, HTML, CSS, Render, Express, OpenAI API.
- **Skills Demonstrated:** Browser Extension APIs, Backend & APIs, Prompt Engineering, GitHub Fundamentals.

Functional Pacman Simulator

July 2024 - August 2024

- **Description:** A lesson in object-oriented programming turned into a personal project, Pacman simulator is an experience where the user directs Pacman around a map containing pellets, ghosts, and walls. A team of enemy ghosts track Pacman, utilizing a shortest path-finding algorithm, which switches to evasive behavior when Pac-Man eats a pellet.
- **Tools Used:** Python, Pygame, GitHub
- **Skills Demonstrated:** Object-Oriented Programming, Model-View-Controller Architecture, Abstraction

Portfolio Website *Deployed at:* <https://wyatt-core-portfolio.vercel.app/>

August 2025

- **Description:** A simple website I built showing my previous projects and demonstrating UI design fundamentals.

EDUCATION

University of Arkansas
B.S. in Computer Science

Fayetteville, Arkansas
Expected Graduation, May 2026

Related Coursework: Data Structures & Algorithms, Database Management, Machine Learning, Artificial Intelligence, Software Engineering, Linear Algebra, Combinatorics, Object-Oriented Programming.

Ouachita Baptist (Transferred after sophomore year)
Computer Science

Arkadelphia, Arkansas
August 2021 - May 2023

Related Coursework: Computer Networking, Website Development, Discrete Mathematics, Computing in Java.

SKILLS

Programming: Python, JavaScript, Java, HTML, CSS, SQL, React.js, TypeScript.

Tools: Pandas, Scikit-Learn, Power BI, Git, Pygubu, Agile, Linux, Windows.

Technical/Programmatic: Data Cleaning/Analysis, Feature Engineering, Data Representation, Data structures, Algorithms, Website Deployment, Object-Oriented Programming, Frontend/Backend Development.
